授課主題

Anesthetic Management of Transapical NeoChord Implantation

摘要

This session highlights key perioperative considerations for beating-heart mitral valve repair using the NeoChord system. Topics include optimal patient selection based on mitral valve morphology and echocardiographic indices, detailed preparation of the OR, and anesthetic management strategies such as airway planning, regional blocks, and hemodynamic control. The role of transesophageal echocardiography (TEE) in guiding implantation and evaluating outcomes will also be emphasized to ensure procedural success and patient safety.
